Fig. 2 PID-A15 Linearity (0-4000ppm)

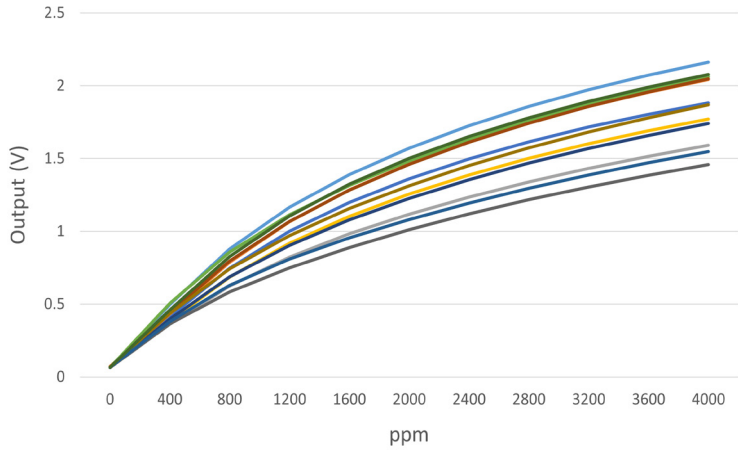

Figure 2 shows the response curve of 20 sensors throughout the entire operating range. PID output is nonlinear at higher concentrations but is repeatable and can be corrected in software.

Fig. 3 Sensitivity Temperature Dependence

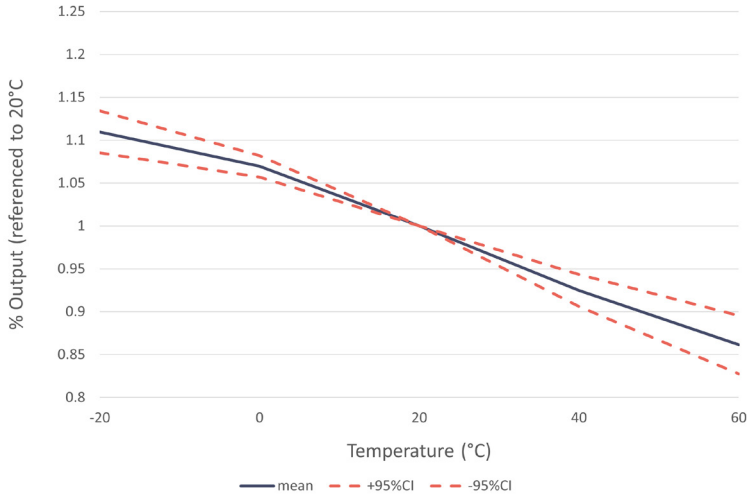

Figure 3 shows the mean and ±95% confidence intervals of the response of the sensors to 100 ppm isobutylene over the entire temperature range. The temperature response follows the ideal gas law.
