## PRODUCT DESCRIPTION

Mightex USB 2.0 monochrome cameras are designed for a wide variety of applications such as digital microscopy and medical imaging, where quality, ease of use, and cost-effectiveness are crucial. Monochrome cameras often exhibit 20% higher spatial resolution than their color counterparts because no pixel interpolation is necessary. Without a Bayer color filter on the sensor, monochrome cameras are also more sensitive than color sensors especially in near IR and UV regions. Frame rate can be as high as 12 fps in full resolution and up to 150 fps using ROI mode. A user-friendly GUI based application software and an SDK are provided for custom software development. In addition, a TWAIN driver, a DirectShow driver and a LabVIEW driver are also provided to easily link the cameras with users' applications. A USB command set protocol and a Linux driver are also provided for non-windows based applications. Window-less cameras are particularly useful for applications that are sensitive to multiple reflections due to the existence of the glass window in front of the CMOS sensor.

## WHAT'S IN A C-MOUNT CAMERA?

A C-mount camera is composed of a CS-mount camera and a CS-to-C-mount adapter. The latter is essentially a 5mm thick threaded ring.
